

## THE HOUSING BALANCE: DESIGN, COMMUNITY & ECONOMY IN THE INDO-PACIFIC

1. What are the factors you face, or that you take into consideration, when approaching or commissioning the design of buildings and spaces?
2. How does sustainability play into this and how has that changed over the last decade?
3. How do housing design outcomes differ between countries? What do different material and technical availabilities mean for these outcomes?
4. What impact does culture have on this? How do different cultures think about housing and how does this link into understandings about community?
5. What changes are on the horizon for housing and residential design and what are the major challenges we will face?

At the end of this panel, attendees will be able to:

- a) Understand the diverse factors that are influencing the environment of housing design in the region that also include sustainability initiatives
- b) Compare housing design outcomes between countries and discuss the impact through specific projects
- c) Consider the cultural considerations for housing that includes a social component and the benefits to the community at large
- d) Understand how our cities and in particular housing is in a state of flux and how change will influence communities in the future.
